What do I ask a client with a history of...

Abdominal Aortic Aneurysm (AAA)

Abdominal Aortic Aneurysm is a ballooning of the aorta as it courses down through the abdomen. The AAA weakens the walls of the aorta possibly causing it to rupture.

Questions:

- How old is the client and when was he/she diagnosed with an abdominal aortic aneurysm?
- What was the treatment, when was it done, and was it successful?
- Have all the follow-up tests and visits been normal?
- Were there any complications related to the AAA?
- What medications is the client currently taking?
- Does the client have any other medical concerns?

**Once these questions are answered, please send an email or fax to me.
I will respond within 24 hours.**
