What do I ask a client with a history of...

Epilepsy (Seizure Disorder)

Epilepsy is an episodic disturbance of consciousness during which generalized convulsions may occur.

Questions:

- How old is the client and when was he/she diagnosed with a seizure disorder?
- When was the client's last seizure? What type of seizure disorder does the client have?
- Was the client ever hospitalized for a seizure and if so, when was the last time?
- What is the frequency and severity of the seizures?
- What is the nature of the treatment and has the client complied with the treatment?
- Has the client made lifestyle changes? Does the client drive and work full time?
- What medications is the client currently taking?
- Does the client have any other medical concerns?

**Once these questions are answered, please send an email or fax to me.
I will respond within 24 hours.**
