What do I ask a client with a history of...

Heart Attack

A heart attack is the death of the heart muscle due to the loss of blood supply. It is usually caused by a complete blockage of a coronary artery.

Questions:

- How old is the client and when did he/she have the heart attack?
- Has the client had more than one heart attack?
- Does the client smoke, have a history of high blood pressure, high cholesterol, obesity or diabetes? If so, has the client made an attempt to change his/her lifestyle?
- What was the treatment for the heart attack?
- Does the client have an arrhythmia? If so, what is the frequency of the arrhythmia? Has the client experienced any chest pains since the heart attack?
- Has the client had any follow-up visits with his doctor? Has he/she had any follow-up tests, such as EKG's, done since the heart attack? If so, what were the results?
- What medications is the client currently taking?
- Does the client have any other medical concerns?

**Once these questions are answered, please send an email or fax to me.
I will respond within 24 hours.**
